

June 12, 2017 0820

The air quality forecast for today and tomorrow is **Moderate** – YELLOW.

This means that conditions are right for the development of pollutants such as ozone to unhealthy levels sometime during the day. Air quality is acceptable; however, for some pollutants there may be a moderate health concern for a small number of people who are unusually sensitive to air pollution. Those individuals that are especially sensitive to air pollution – asthma, heart disease, COPD, bronchitis, should remain indoors with air conditioning or fans operating and limit physical activity.

To help reduce ozone pollution during this advisory, you can limit your driving, fill gas tanks in early morning or late evening, wait to mow your lawns until late evening.

Check back at www.airnow.gov throughout the week to keep up on air quality conditions.
